Parts marked with " 
 are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

# SHARP CORPORATION

This document has been published to be used for after sales service only.

The contents are subject to change without notice.

### SAFETY PRECAUTION

#### IMPORTANT SERVICE SAFETY PRECAUTION

Service work should be performed only by qualified service technicians who are thoroughly familiar with all safety checks and the servicing guidelines which follow:

#### ■WARNING

- 1. For continued safety, no modification of any circuit should be attempted.
- 2. Disconnect AC power before servicing.

**CAUTION**: FOR CONTINUED PROTECTION AGAINST A RISK OF FIRE REPLACE ONLY WITH SAME TYPE FUSE.

F7000 (250V 5A)

F7001 (250V 5A)

# ■BEFORE RETURNING THE RECEIVER (Fire & Shock Hazard)

# Before returning the receiver to the user, perform the following safety checks:

- Inspect all lead dress to make certain that leads are not pinched, and check that hardware is not lodged between the chassis and other metal parts in the receiver.
- Inspect all protective devices such as non-metallic control knobs, insulation materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
- 5. To be sure that no shock hazard exists, check for leakage current in the following manner.
- Plug the AC cord directly into a 120 volt AC outlet.

- Using two clip leads, connect a 1.5k ohm, 10 watt resistor paralleled by a  $0.15\mu$ F capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to an earth ground.
- Use an AC voltmeter having with 5000 ohm per volt, or higher, sensitivity or measure the AC voltage drop across the resistor.
- Connect the resistor connection to all exposed metal parts having a return to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.

All checks must be repeated with the AC cord plug connection reversed. (If necessary, a nonpolarized adaptor plug must be used only for the purpose of completing these checks.)

Any reading of 0.75 Vrms (this corresponds to 0.5 mA rms AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the monitor to the owner.

For continued protection, replacement parts must be identical to those

The use of a substitute replacement parts which do not have the same

safety characteristics as the factory recommended replacement parts

shown in this service manual, may create shock, fire or other hazards.

used in the original circuit.

#### SAFETY NOTICE

Many electrical and mechanical parts in LCD color television have special safety-related characteristics.

These characteristics are often not evident from visual inspection, nor can protection afforded by them be necessarily increased by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features

are identified by "  $\Delta$  " and shaded areas in the Replacement Parts List and Schematic Diagrams.

#### PRECAUTIONS A PRENDRE LORS DE LA REPARATION

Ne peut effectuer la réparation qu' un technicien spécialisé qui s'est parfaitement accoutumé à toute vérification de sécurité et aux conseils suivants.

#### AVERTISSEMENT

- 1. N'entreprendre aucune modification de tout circuit. C'est dangereux.
- 2. Débrancher le récepteur avant toute réparation.

**PRECAUTION**: POUR LA PROTECTION CON-TINUE CONTRE LES RISQUES D'INCENDIE, REMPLACER LE FUSIBLE

F7000 (250V 5A)

F7001 (250V 5A)

#### ■ VERIFICATIONS CONTRE L'INCEN-DIE ET LE CHOC ELECTRIQUE

#### Avant de rendre le récepteur à l'utilisateur, effectuer les vérifications suivantes.

- Inspecter tous les faisceaux de câbles pour s'assurer que les fils ne soient pas pincés ou qu'un outil ne soit pas placé entre le châssis et les autres pièces métalliques du récepteur.
- 4. Inspecter tous les dispositifs de protection comme les boutons de commande non-métalliques, les isolants, le dos du coffret, les couvercles ou blindages de réglage et de compartiment, les réseaux de résistancecapacité, les isolateurs mécaniques, etc.
- 5. S'assurer qu'il n'y ait pas de danger d'électrocution en vérifiant la fuite de courant, de la facon suivante:
- Brancher le cordon d'alimentation directem-ent à une prise de courant de 120V. (Ne pas utiliser de transformateur d'isolation pour cet essai).

• A l'aide de deux fils à pinces, brancher une résistance de 1.5 k $\Omega$ 10 watts en parallèle avec un condensateur de  $0.15\mu$ F en série avec toutes les pièces métalliques exposées du coffret et une terre connue comme une conduite électrique ou une prise de terre branchée à la terre.

- Utiliser un voltmètre CA d'une sensibilité d'au moins 5000Ω/V pour mesurer la chute de tension en travers de la résistance.
- Toucher avec la sonde d'essai les pièces métalliques exposées qui présentent une voie de retour au châssis (antenne, coffret métallique, tête des vis, arbres de commande et des boutons, écusson, etc.) et mesurer la chute de tension CA en-travers de la résistance. Toutes les vérifications doivent être refaites après avoir inversé la fiche du cordon d'alimentation. (Si nécessaire, une prise d'adpatation non polarisée peut être utilisée dans le but de terminer ces vérifications.)

La tension de pointe mesurèe ne doit pas dépasser 0.75V (correspondante au courant CA de pointe de 0.5mA).

Dans le cas contraire, il y a une possibilité de choc électrique qui doit être supprimée avant de rendre le récepteur au client.

#### AVIS POUR LA SECURITE

De nombreuses pièces, électriques et mécaniques, dans les téléviseur ACL présentent des caractéristiques spéciales relatives à la sécurité, qui ne sont souvent pas évidentes à vue. Le degré de protection ne peut pas être nécessairement augmentée en utilisant des pièces de remplacement étalonnées pour haute tension, puissance, etc.

Les pièces de remplacement qui présentent ces caractéristiques sont identifiées dans ce manuel; les pièces électriques qui présentent ces particularités sont identifiées par la marque "<u>\</u>" et hachurées dans la liste des pièces de remplacement et les diagrammes schématiques.

Pour assurer la protection, ces pièces doivent être identiques à celles utilisées dans le circuit d'origine. L'utilisation de pièces qui n'ont pas les mêmes caractéristiques que les pièces recommandées par l'usine, indiquées dans ce manuel, peut provoquer des électrocutions, incendies, radiations X ou autres accidents.

#### LC-52LE920UN/LC-60LE920UN PRECAUTIONS FOR USING LEAD-FREE SOLDER

#### ■Employing lead-free solder

• "PWBs" of this model employs lead-free solder. The LF symbol indicates lead-free solder, and is attached on the PWBs and service manuals. The alphabetical character following LF shows the type of lead-free solder.

Example:

Indicates lead-free solder of tin, silver and copper.

Indicates lead-free solder of tin, silver and copper.

Sn-Ag-Cu

L F a/a

#### ■Using lead-free wire solder

• When fixing the PWB soldered with the lead-free solder, apply lead-free wire solder. Repairing with conventional lead wire solder may cause damage or accident due to cracks.

As the melting point of lead-free solder (Sn-Ag-Cu) is higher than the lead wire solder by 40 °C, we recommend you to use a dedicated soldering bit, if you are not familiar with how to obtain lead-free wire solder or soldering bit, contact our service station or service branch in your area.

#### ■Soldering

 As the melting point of lead-free solder (Sn-Ag-Cu) is about 220 °C which is higher than the conventional lead solder by 40 °C, and as it has poor solder wettability, you may be apt to keep the soldering bit in contact with the PWB for extended period of time. However, Since the land may be peeled off or the maximum heat-resistance temperature of parts may be exceeded, remove the bit from the PWB as soon as you confirm the steady soldering condition.

Lead-free solder contains more tin, and the end of the soldering bit may be easily corroded. Make sure to turn on and off the power of the bit as required.

If a different type of solder stays on the tip of the soldering bit, it is alloyed with lead-free solder. Clean the bit after every use of it.

When the tip of the soldering bit is blackened during use, file it with steel wool or fine sandpaper.

• Be careful when replacing parts with polarity indication on the PWB silk.

Lead-free wire solder for servicing

The performance specification figures indicated are nominal values of production units. There may be some deviations from these values in individual units.

# **CHAPTER 2. OPERATION MANUAL**

# [1] Parts Name

\*1 External equipment connection.

\*2 Details on the Audio Select function.

### **Remote Control Unit**

- NOTE
- When using the remote control unit, point it at the TV.

- 1 **POWER:** Switch the TV power on or enter standby.
- 2 TV, STB, DVD•VCR, AUDIO: Switches the remote
  - control for TV, STB, DVD, BD, VCR and AUDIO operation.
    \* To enter the code registration mode, you need to press an appropriate button (STB, DVD-VCR or AUDIO) and DISPLAY at the same time.
- **3 External equipment operational buttons:** Operate the external equipment.
- 4 **OPTION:** Display the Link Operation Menu screen. This button will function only when AQUOS LINK is used.
- **5 SLEEP:** Set the sleep timer.
- 6 0–9: Set the channel.
- 7 (DOT):
- 8 CC: Display captions from a closed-caption source.
- 9 AV MODE: Select an audio or video setting.
- **10 MUTE:** Mute the sound.
- **11** VOL + / : Set the volume.
- 12 MENU: Display the menu screen.
- **13 AQUOS NET:** Switches the display to the Sidebar Widget, TV + Web, Web or TV screen.
- 14  $\blacktriangle/ \bigtriangledown / \blacklozenge / \blacklozenge$ , ENTER: Select a desired item on the screen.
- **15 EXIT:** Turn off the menu screen.
- 16 FAVORITE CH: Set the favorite channels.
- 17 A, B, C, D: Select 4 preset favorite channels in 4 different categories.

While watching, you can toggle the selected channels by pressing A, B, C and D.

- 18 **DISPLAY:** Display the channel information.
- **19 POWER (SOURCE):** Turns the power of the external equipment on and off.
- **20 FREEZE:** Set the still image. Press again to return to normal screen.
- 21 **POWER SAVING:** Select Power Saving settings.
- **22 ENT:** Jumps to a channel after selecting with the **0–9** buttons.
- 23 FLASHBACK: Return to the previous channel or external input mode.
- 24 VIEW MODE: Select the screen size.
- 25 INPUT: Select a TV input source. (TV, COMPONENT, VIDEO, PC IN, HDMI 1, HDMI 2, HDMI 3, HDMI 4, USB)
- **26** CH  $\checkmark/\land$  : Select the channel.
- 27 APPS: Display the application window.
- 28 **RETURN:** Return to the previous menu screen.
- **29 FAV APP 1, 2, 3:** You can assign your favorite applications to these buttons.

### [2] OPERATION MANUAL

# Attaching the Stand (LC-52LE920UN Only)

- Before attaching (or detaching) the stand, unplug the AC cord.
- · Before performing work spread cushioning over the base area to lay the TV on. This will prevent it from being damaged.

#### CAUTION

- Attach the stand in the correct direction.
- · Do not remove the stand from the TV unless using an optional wall mount bracket to mount it.
- Be sure to follow the instructions. Incorrect installation of the stand may result in the TV falling over.
- 1 Confirm that there are 9 screws (5 short screws and 4 long screws) supplied with the stand unit.

- 2 Attach the supporting post for the stand unit onto the base using the box for the stand unit as shown below.
  - The supporting post attaches to the base at an offcentered location on the base. Be sure to attach the supporting post in the direction indicated below and attach the stand to the TV with the wider side of the base facing forward.

**3** Insert the stand into the openings on the rear of the TV.

**4** Insert and tighten the 4 screws into the 4 holes on the rear of the stand unit.

5 ① Insert the stand cover.② Insert the screw to secure the stand cover.

NOTE • To detach the stand, perform the steps in reverse order.

# **CHAPTER 3. DIMENSIONS**

# [1] DIMENSIONS (LC-52LE920UN)

Unit: inch (mm)

## [2] DIMENSIONS (LC-60LE920UN)

Unit: inch (mm)

# **CHAPTER 4. REMOVING OF MAJOR PARTS**

### [1] REMOVING OF MAJOR PARTS (LC-52LE920UN)

#### 1. Removing of Stand Unit and Rear Cabinet Ass'y.

- 1. Remove the 1 lock screw  $\oplus$  and detach the Support Cover @.
- 2. Remove the 4 lock screws  $\circledast$  and detach the Stand Unit  $\circledast.$
- 3. Remove the 1 lock screw and detach the AC Cord Cover .
- 4. Disconnect AC Cord  $\bigcirc$ .
- 5. Remove the 4 lock screws (8), 4 lock screws (9), 1 lock screw (10) and 18 lock screws (11) and detach the Rear Cabinet Ass'y (12).

#### 2. Removing of Speaker-L/R.

- 1. Remove the 2 lock screws and detach the Stand Cover .
- 2. Disconnect SP wire.
- 3. Detach the Speaker-L ③, Speaker-R ④.

#### 3. Removing of Connectors

- 1. Disconnect the following connectors from the MAIN Unit. (SB, LB, PD, LW, RA, RL)
- 2. Disconnect the following connectors from the POWER/LED Drive Unit. (LA, PD, PL)
- 3. Disconnect the following connectors from the LCD Control Unit. (LW, PL)

#### 4. Removing of MAIN Unit, POWER Unit, Woofer, Stand Angle, 52" LCD Panel Module Unit.

- 1. Remove the 7 lock screws and detach the MAIN Unit .
- 2. Remove the 2 lock screws 3 and detach the Terminal Cover (Bottom) 4.
- 3. Remove the 2 lock screws (5) and detach the Terminal Cover (Side) (6).
- 4. Remove the 6 lock screws  $\oslash$  and detach the POWER Unit  $\circledast$ .
- 5. Remove the 4 lock screws 9 and detach the Sub Woofer 0.
- 6. Remove the 1 lock screw and detach the LCD Fixing Angle (Bottom-R) .
- 7. Remove the 2 lock screws 3 and detach the LCD Fixing Angle (Top-L) 4.
- 8. Remove the 2 lock screws and detach the LCD Fixing Angle (Top-R) .
- 9. Remove the 2 lock screws 0 and detach the LCD Fixing Angle (Bottom-L) (0.
- 10.Remove the 2 lock screws  $\circledast$  and detach the LCD Fixing Angle (B-MA) @.
- 11. Remove the 2 lock screws 0 and detach the LCD Fixing Angle (B-MB) 0.
- 12. Remove the 8 lock screws @ and detach the Stand Angle @.
- 13. Remove the 3 lock screws (8) and detach the BL Support Angle (8).
- 14.Remove the 6 lock screws @ and detach the 52" LCD Panel Module Unit @.

# 5. Removing of R/C, LED Unit, ICON Unit, LOGO Unit, Front Cabinet Ass'y, Glass Front Panel Ass'y, TOUCH SENSOR Unit.

- 1. Detach the R/C, LED Unit ①.
- 2. Detach the ICON Unit 2.
- 3. Detach the LOGO Unit ③.
- 4. Remove the 28 Hooks  $\circledast$  and detach the Front Cabinet Ass'y  $\circledast$
- 5. Detach the Glass Front Panel Ass'y  $_{\textcircled{6}}$ .
- 6. Detach the Touch Sensor Unit  $\mathcal{D}$ .

NOTE: The Touch Sensor unit  $\ensuremath{\mathbb O}$  removed once is not reusable.

### [2] REMOVING OF MAJOR PARTS (LC-60LE920UN)

#### 1. Removing of Stand Unit and Rear Cabinet Ass'y.

- 1. Remove the 3 lock screw and detach the Support Cover .
- 2. Remove the 4 lock screws  $\circledast$  and detach the Stand Unit  $\circledast.$
- 3. Remove the 1 lock screw 5 and detach the AC Cord Cover 6.
- 4. Disconnect AC Cord  $\bigcirc$ .
- 5. Remove the 4 lock screws (a), 7 lock screws (a), 2 lock screws (a) and 18 lock screws (b) and detach the Rear Cabinet Ass'y (b).

#### 2. Removing of Speaker-L/R.

- 1. Remove the 2 lock screws and detach the Stand Cover .
- 2. Disconnect SP wire.
- 3. Detach the Speaker-L ③, Speaker-R ④.

#### 3. Removing of Connectors

- 1. Disconnect the following connectors from the MAIN Unit. (SB, LB, PD, LW, RA, RL)
- 2. Disconnect the following connectors from the POWER/LED Drive Unit. (LA, PD, PL)
- 3. Disconnect the following connectors from the LCD Control Unit. (LW, PL)

#### 4. Removing of MAIN Unit, POWER Unit, Woofer, Stand Angle,60" LCD Panel Module Unit.

- 1. Remove the 7 lock screws and detach the MAIN Unit .
- 2. Remove the 2 lock screws  $\circledast$  and detach the Terminal Cover (Bottom)  $\circledast.$
- 3. Remove the 2 lock screws 5 and detach the Terminal Cover (Side) 6.
- 4. Remove the 6 lock screws  $\oslash$  and detach the POWER Unit  $\circledast$ .
- 5. Remove the 4 lock screws  $\circledast$  and detach the Sub Woofer  $\circledast.$
- 6. Remove the 1 lock screw and detach the LCD Fixing Angle (Bottom-R) .
- 7. Remove the 2 lock screws 0 and detach the LCD Fixing Angle (Top-L) 0.
- 8. Remove the 2 lock screws and detach the LCD Fixing Angle (Top-R)
- 9. Remove the 2 lock screws 0 and detach the LCD Fixing Angle (Bottom-L) 0 .
- 10. Remove the 4 lock screws () 2 lock screws (2) and detach the 2 LCD Fixing Angle (B-MA) (2) and 2 Fixing Angle (B-M2) (2).
- 11. Remove the 12 lock screws  $\circledast$  and detach the 2 Stand Angle  $\circledast$ .
- 12.Remove the 3 lock screws  $\circledast$  and detach the BL Support Angle  $\oslash.$
- 13. Remove the 11 lock screws @ and detach the 60" LCD Panel Module Unit @.

5. Removing of R/C, LED Unit, ICON Unit, LOGO Unit, Front Cabinet Ass'y, Glass Front Panel Ass'y, TOUCH SENSOR Unit.

- 1. Detach the R/C, LED Unit 1.
- 2. Detach the ICON Unit 2.
- 3. Detach the LOGO Unit ③.
- 4. Remove the 28 Hooks  $\circledast$  and detach the Front Cabinet Ass'y  $\circledast$
- 5. Detach the Glass Front Panel Ass'y  $_{\textcircled{6}}$ .
- 6. Detach the Touch Sensor Unit  $\bigcirc$ .

NOTE: The Touch Sensor unit  $\ensuremath{\textcircled{O}}$  removed once is not reusable.

### LC-52LE920UN/LC-60LE920UN [3] Caution Cleaning Glass

#### 1. Glass handling

CAUTION: (1) As for handling, wear clean gloves, protective footwear and mask.

(2) Inner gloves are covered in the Nitrile gloves.

- (3) Nitrile gloves are exchanged with the following standard.
- · When it touched a face and so on.
- When another work was done.
- By the work of fifty times.
- In the time for recess.
- When it became dirty.
- When it tore.

#### changed to new Nitrile gloves

(4) It has a black mask part.You must not have a clear surface.

(5) Two people have handling equally by the work.(Maintain it so that glass is not warped.)

(6) When it is put horizontally, it is put on the flat mat.

(7) A cushion material is put between glass.It doesn't touch it [the front and the front].It can be put to two glass.

(8) It has a module part before the CAB-B installation.(It has a module part.)

#### 2. Glass cleaning

CAUTION: (1) Visual inspection is done on the black mat.

(2) Dust and trash are taken with an air blow.

```
(3) Dirt is wiped out with cloth.Front side: MoufasBack side: Cotton (clean wiper SF-30C)
```

(4) When dirt doesn't clean, it is wiped out with Alcohol.

(5) Dirt is wiped out with the Ethanol and clean cloth. When wipe off a dirt the trace which wiped do not be left.

# [4] How to replace the touch key sensor PWB

- 1. Replace the touch key sensor PWB in a clean room.
  - Be sure to remove the dust from the unit before carrying it into the clean room.
- 2. Remove the touch key sensor PWB from the front glass.
- Clean the bonding surface with alcohol.
   Depending on the dirt, water solution of 80%vol can be effective.
- 4. Adhere a spacer before bonding the touch unit.

Product Manual Touch Sensor with ITO (Transparent Electrode)

i) Remove the touch sensor from the front glass.

ii) Adhere the spacer to the back of the FPCB section.

\* When peeling the ITO section, check that there is no glue residue on the front glass.

If glue residue, dirt, fingerprints, etc. are found, wipe them off with anhydrous alcohol.

Do not apply anhydrous alcohol to the double-sided tape on the metal part attaching to the glass.

- ii-1. Peel the release paper of the double-sided tape on the FPCB section.
- ii-2. Adhere the spacer to the FPCB section. (Use the right and upper sides of the FPCB section as a reference.)
- \* Check that the spacer does not contact with the ITO section.

Tape fixing the FPCB and ITO sections (Adhered by the supplier)

- iii-1. Peel the release paper of the double-sided tape on the ITO section.
- iii-2. Slowly adhere it from the end using a roller. (Position the touch sensor using the jig.)
- \* Check that there are no bubbles in the ITO section after adhered.
- \* Adhering error: ±1.0mm
- iv) Adhere the FPCB section to the front glass.

- iv -1. Lift the FPCB section to peel the release paper of the double-sided tape on the spacer.
- \* Be careful not to apply stress to the joint of FPCB and ITO.

iv -2. Adhere the FPCB section to the front glass. \* Be careful not to apply stress to the joint of FPCB and ITO.

iv -3. Peel the tape fixing the FPCB and ITO sections.

5. Attach the touch unit bonding procedure.

It includes peeling of the protective sheet.

How to mount the touch sensor

- i) Adhere after positioned using the positioning jig.
- ii) Peel the protective sheet by means of the pull tap for peeling the protective sheet.
- iii) Adhere the FPCB to the glass. (Do not warp the FPCB if possible.)

iv) Peel the protective sheet of the OCA.

Lift the ITO section, then peel the protective sheet by about half by means of the pull tap.

\* Peeling it completely reduces workability. Check the order due to workability.

- v) Contact the FPCB and joint end of the transparent electrode film with the glass.
  - \* Grasp the opposite end. Note that the ITO is positioned by adhering.

\*Note: Do not bend the PWB (FPCB section) and sheet (ITO section).

vi) Adhere the transparent electrode completely.

Peel the front protective sheet.

If bubbles are found, press those portions with glass cleaning cloth, etc. to remove them as much as possible.

Pull tap for peeling the front protective sheet

• Use a rubber roller since pressure exerted by it removes bubbles easily. See photo below.

• For the TOUCH SENSOR Unit positioning figure, see page 5-1, 5-2, 5-3, 5-4.

# **CHAPTER 5. ADJUSTMENT**

# [1] ADJUSTMENT PROCEDURE

The adjustment values are set to the optimum conditions at the factory before shipping. If a value should become improper or an adjustment is required due to part replacement, make an adjustment according to the following procedure.

#### 1. After replacement of any PWB unit and/or IC for repair, please note the following.

• When replacing the following units, make sure to prepare the new units loaded with updated software.

MAIN Unit: DKEYMF452FM20

• When replacing the LCD control PWB, perform the VCOM adjustment.

#### 2. Upgrading of each microprocessor software

CAUTION: Never "POWER OFF" the unit when software upgrade is ongoing.

Otherwise the system may be damaged beyond recovery.

#### 2.1. Software version upgrade

The model employs the following software.

- Main software (please use a software version after HLI2Bxxx.USB).
- Monitor microprocessor software (please use a software version after HLI2Bxxx.USB and HLNIMxxx.BIN.)

The main software, monitor microprocessor software can be upgraded by using a general-purpose USB Memory.

The followings are the procedures for upgrading, explained separately for the main software, monitor microprocessor software.

#### 2.2. Main software version upgrade

#### 2.2.1 Get ready before you start

- USB Memory of 128MB or higher capacity.
- PC running on Windows 98/98SE/ME/2000/XP operating system.
- · USB Memory reader/writer or PC with a USB port.
- The file system of a USB memory is FAT. (FAT32 supports)
- Use the USB memory without other functions. (lock and memory reader...etc)

#### 2.2.2 Preparations

To upgrade the main software, it is necessary to get ready the USB Memory for version upgrade before you start.

Follow the steps below and create the USB Memory for version upgrade.

1. Copy the file HLI2Bxxx.USB for version upgrade to the root directory (folder) of the USB Memory.

NOTE: In the USB Memory drive, do not store other folders or unrelated files, or more than one file for version upgrade.

Now the USB Memory for version upgrade is ready.

#### 2.2.3 How to upgrade the software

- 1. Plug AC cord and turn on the TV.
- 2. After picture displayed, touch the power key for 5seconds.
- NOTE: Picture will disappear when you touch the power key, but keep touching it.
- 3. When the center icon LED blinks, release your finger from the power key.
- 4. Next, touch the "POWER" and "CH ( )" keys at the same time.
- 5. When the center icon LED turns on, release your finger form the keys.
- 6. After the unit startup, the system upgrade screen as shown below within 20-40 seconds.

| Software Upd |                  |          | LE920UI |
|--------------|------------------|----------|---------|
|              | MAIN             | 50%      |         |
|              | SUB MICOM        | NO DATA  |         |
|              | PANEL EEPROM     | NO DATA  |         |
| M/           | AIN Version      | U0811121 |         |
| SU           | IB MICOM Version |          |         |
| РА           | NEL EEPROM       |          |         |
|              |                  |          |         |

7. Even a single failure in the process will trigger the upgrade failure screen.

|                   |            | LE920UN |
|-------------------|------------|---------|
| MAIN              | Project ID |         |
| SUB MICOM         | NO DATA    |         |
| PANEL EEPROM      | NO DATA    |         |
| MAIN Version      |            |         |
| SUB MICOM Version |            |         |
| PANEL EEPROM      |            |         |

- NOTE: In the event of a failure, repeat the upgrade process. If the process repeatedly fails, it is likely that the hardware need fixing.
- 8. Upon completion of the whole process, the upgrade success screen as shown below appears. You can check the new software version on this screen. The version information appears after the upgrade is complete.

| 🖞 Software | Update<br>UPGRADE | SUCCESS | LE920UN |
|------------|-------------------|---------|---------|
|            | MAIN              | 100%    |         |
|            | SUB MICOM         | NO DATA |         |
|            | PANEL EEPROM      | NO DATA |         |
|            | MAIN Version      |         |         |
|            | SUB MICOM Version |         |         |
|            | PANEL EEPROM      |         |         |
|            |                   |         |         |

- 9. Unplug the AC cord and remove the USB Memory for version upgrade.
- 10.Now the software version upgrade is complete.
- NOTE: When you are done with the software version upgrade, start the set, go to the top page of the adjustment process screen and check the main software version information.

#### 2.3. Monitor microprocessor software version upgrade

Create the USB memory for monitor microprocessor software version upgrade in the same manner as explained in the "Main software version upgrade".

Copy the file HLI2Bxxx.USB and HLNIMxxx.BIN (named temporarily) for monitor microprocessor software version upgrade to the USB memory.

#### 2.3.1 How to upgrade the software

- 1. Plug AC cord and turn on the TV.
- 2. After picture displayed, touch the power key for 5seconds.

NOTE: Picture will disappear when you touch the power key, but keep touching it.

- 3. When the center icon LED blinks, release your finger from the power key.
- 4. Next, touch the "POWER" key with the "CH ( )" key touching.
- 5. When the center icon LED turns on, release your finger form the keys.
- CAUTION: The moment this operation is done, the upgrading of the monitor microprocessor software starts. While the upgrade is ongoing, never power off the unit. Otherwise the upgrade will fail and the system may be serious damaged beyond recovery (inability to start).
  - After the monitor microprocessor software is upgraded, also perform the 'Industry Init'.
- 6. After the unit startup, the upgrade starts. The power led will blink continuously. Also, an upgrade screen will be shown during a minor upgrade.

|                   |         | LE920UN |
|-------------------|---------|---------|
|                   |         |         |
| MAIN              | NO DATA |         |
| SUB MICOM         | 50%     |         |
| PANEL EEPROM      | NO DATA |         |
| MAIN Version      |         |         |
| SUB MICOM Version | 0.820   |         |
| PANEL EEPROM      |         |         |
|                   |         |         |

7. If the upgrade fails, power led will stop blinking. Also, the upgrade failure screen will be shown if upgrade screen was shown at 5.

| ∷Software Upda | te            |              | LE920UN |
|----------------|---------------|--------------|---------|
|                |               |              |         |
|                | MAIN          | NO DATA      |         |
|                | SUB MICOM     | SAME VERSION | 1       |
|                | PANEL EEPROM  | NO DATA      |         |
| MAI            | N Version     |              |         |
| SUB            | MICOM Version |              |         |
| PAN            | IEL EEPROM    |              |         |
|                |               |              |         |

- NOTE: In the event of a transient failure, upgrade will be automatically retried up to three times. If the process repeatedly fails, hardware may be the cause.
- 8. The upgrade success screen will be shown if upgrade screen was shown at 5.

| ∰ Software Update | UPGRADE S         | UCCESS  | LE920UN  |
|-------------------|-------------------|---------|--|
|                   | MAIN              | NO DATA |  |
|                   | SUB МІСОМ         | 100%    |  |
|                   | PANEL EEPROM      | NO DATA | - and a second sec |
| MAIN              | Version 🔛         |         |  |
| SUB M             | 1ICOM Version 🛛 🔛 | 0.820   |  |
| PANEL             | EEPROM            |         |  |
|                   |                   |         |  |

- 9. Unplug the AC cord and remove the USB Memory for version upgrade.
- 10.Now the software version upgrade is complete.
- NOTE: When you are done with the software version upgrade, start the set, go to the top page of the adjustment process screen and check the monitor microprocessor software version information and panel size information.

#### 3. Entering and exiting the adjustment process mode

- 1) Before entering the adjustment process mode, the AV position RESET in the video adjustment menu.
- 2) At the state TV is turned on, touch the power key for 5seconds.
- NOTE: Picture will disappear when you touch the power key, but keep touching the power key.
- 3) When the center icon LED blinks, release your finger from the power key.
- Next, touch the "POWER" key with the "VOL (—)" and "INPUT" key touching. TV will turn on and the letter "<K>" appears on the screen.
- 5) Next, touch the "VOL (—)" and "CH (  $\checkmark$  )" keys at the same time.
- 6) When the center icon LED turns on, release your finger form the keys.

(The "VOL (—)" and "CH (  $\checkmark$  )" keys should be pressed and held until the display appears.)

Multiple lines of blue characters appearing on the display indicate that the unit is now in the adjustment process mode.

When you fail to enter the adjustment process mode (the display is the same as normal startup), retry the procedure.

- 7) To exit the adjustment process mode after the adjustment is done, unplug the AC cord from the outlet to make a forced shutdown. (When the power was turned off with the remote controller, once unplug the AC cord and plug it again. In this case, wait 10 seconds or so before plugging.)
- CAUTION: Use due care in handling the information described here lest your users should know how to enter the adjustment process mode. If the settings are tampered in this mode, unrecoverable system damage may result.

#### 4. Remote controller key operation and description of display in adjustment process mode

1) Key operation

| Remote controller key | Main unit key | Function                                    |
|-----------------------|---------------|---|
| CH ( / / )            | CH ( / / / )  | Moving an item (line) by one (UP/DOWN)      |
| VOL (+/-)             | VOL (+/-)     | Changing a selected item setting (+1/ -1)   |
| Cursor (UP/DOWN)      |               | Turing a page (PREVIOUS/NEXT)               |
| Cursor (LEFT/RIGHT)   |               | Changing a selected line setting (+10/ –10) |
| INPUT                 |               | Input switching (toggle switching)          |
| ENTER                 |               | Executing a function                        |

\*Input mode is switched automatically when relevant adjustment is started so far as the necessary input signal is available.

2) Description of display

#### \*2 Details of P1.10 (ERROR STANDBY CAUSE)

- 11 Prolonged unspecified-signal input in PC mode in the cause of continuous "out of range", PC input mode
- 17 Temperature error1A Monitor trouble detected
- in the cause of abnormal temperature
- in the cause of abnormal monitor mode
- 22 LCD controller Rom error in the cause of software abnormality of LCD controller

#### 6. Special features

- \* STANDBY CAUSE (Page 1/24)
  - Display of a cause (code) of the last standby

The cause of the last standby is recorded in EEPROM whenever possible.

Checking this code will be useful in finding a problem when you repair the troubled set.

- \* EEP SAVE (Page 24/24)
- Storage of EEP adjustment value
- \* EEP RECOVER (Page 24/24)

Retrieval of EEP adjustment value from storage area

#### 7. Microprocessor software writing

#### 7.1. Main microprocessor/monitor microprocessor software writing (Main PWB: QPWBXF452WJZZ)

|   | Adjustment item           | Adjustment conditions | Adjustment procedure  |
|---|---------------------------|-----------------------|---|
| 1 | Main microprocessor/moni- | Software Version Up   | 1. Insert a USB memory for the main/monitor microprocessor into the service con-  |
|   | tor microprocessor soft-  |                       | nector.   |
|   | ware writing              |                       | 2. Supply AC power and write the main software to IC8401 and the monitor micro-   |
|   | <main pwb=""></main>      | File version check    | processor software to IC2002.   |
|   |                           | USB memory check      | 3. Check that writing is normally completed and turn off the power.   |
|   |                           |                       | CAUTION: When the USB memory is not inserted or reading error occurs, nothing<br>is written. (The former models have read the main software from the<br>writing jig. However, this model reads the main/monitor software from<br>the USB memory.) |
|   |                           | * When IC is failure  | Please exchange to another PWB unit when IC8401 (NAND Flash) is failure.<br>(Because the software can't be written with USB memory, when the new IC is<br>exchanged from broken IC)   |

#### 7.2. Model/inch discrimination writing (Main PWB: QPWBXF452WJZZ)

- When writing the sub microprocessor software, the model data is configured with the software from the USB memory mounted to the checker.
- Reference and setting change are enabled through the process menu and RS-232C communication.

#### 8. Signal adjustment

#### 8.1. LCD section adjustment [LCD module adjustment]

|   | Adjustment item   | Adjustment conditions                             | Adjustment procedure  |
|---|---|---|---|
| 1 | Opposite bias adjustment<br>(LCD module adjustment<br>item) | Adjustment in the center<br>position of the panel | <ol> <li>Enter the process mode using the process adjustment remote control.</li> <li>Select [VCOM ADJ] using the Channel ∧/ ∨ keys on the remote control.</li> <li>Press the Enter key to check that the pattern for adjustment is displayed.</li> <li>Make adjustment so that the flicker located in the center of the screen is minimized using the Volume +/- keys on the remote control.</li> <li>If the optimum condition is obtained in step 4, press the Enter key to turn off the pattern.</li> <li>CAUTION: * Make adjustment with no ANT signal (since the brightness is changed by the active backlight).</li> <li>[Adjustment position]</li> </ol> |

#### 8.2. Image adjustment

#### 8.2.1 Device check

Before adjustment, check that the adjustment jig and signal source are set for Sharp LCD US.

Signal adjustment works at only the default View Mode.

Before adjustment, confirm the View Mode is set as follows.

| Adjustment Type | Default View Mode |
|-----------------|-------------------|
| Composite/Tuner | S.Stretch         |
| Comp15k         | S.Stretch         |
| Comp33k         | Stretch           |
| Analog RGB      | Stretch           |

Signal generator level adjustment check (Adjust to the standard value level.)

|              | $0.714$ Vp-p $\pm 0.02$ Vp-p (Pedestal to white) |
|--------------|--|
| Y level:     | 0.714Vp-p± 0.02Vp-p (Pedestal to white)          |
| PB/PR level: | 0.7Vp-p ± 0.02Vp-p                               |
| Y level:     | $0.7Vp$ -p $\pm 0.02Vp$ -p (Pedestal to white)   |
| PB/PR level: | 0.7Vp-p ± 0.02Vp-p                               |
| RGB level:   | $0.7Vp$ -p $\pm 0.02Vp$ -p (Pedestal to white)   |

# 10. Key writing

#### 10.1. EDID writing (Main PWB: QPWBXF452WJZZ)

|   | Adjustment point                      | Adjustment conditions                      | Adjustment procedure   |
|---|---------------------------------------|--|--|
| 1 | HDMI EDID writing<br>(Main PWB)       | Process mode<br>Model discrimination check | <ol> <li>Enter the process mode.</li> <li>Point the cursor to [HDMI EDID WRITE] and press the [ENT]<br/>key.</li> <li>The writing is complete when [OK] is displayed.<br/>(If not written, HDMI does not function.)</li> </ol>   |
|   |                                       |  | CAUTION: Perform the data writing after setting the model discrimi-<br>nation. The data based on the model discrimination<br>information is recorded in EEPROM.  |
| 2 | Analog RGB EDID writing<br>(Main PWB) | Inspection mode<br>File version check      | <ol> <li>Write the EDID data for analog RGB into IC509 mounted on the<br/>main PWB using the checker.<br/>TL511 ••• I2C clock, TL508 ••• I2C data<br/>TL544 ••• 5V, TL507 ••• GND<br/>TL585 ••• Write protection (H: WP, L: write enable)</li> <li>Perform the data writing before making inspection using the<br/>checker.</li> </ol> |

#### 11. Factory setting

After completing the factory setting, pull out the AC cord to complete the setting.

CAUTION: Do not turn on the power after completing the factory setting. If the power is turned on, configure the factory setting again.

|   | Adjustment point | Adjustment conditions    | Adjustment procedure  |
|---|------------------|--------------------------|---|
| 1 | Factory setting  | Complete the setting by  | •Point the cursor to [INDUSTRY INIT], set to "ON" using [+]/[-] of the [VOL] key, and press |
|   |                  | pulling out the AC cord. | the [ENT] key.  |
|   |                  |                          | The version confirmation screen appears on the green screen. It is completed when [SUC-     |
|   |                  |                          | CESS] is displayed at the top.  |
|   |                  |                          | (If error occurs, [ERROR] is displayed on the red screen.)                                  |
|   |                  |                          | •Turn off the AC power.   |
|   |                  |                          | The following items are initialized when configuring the factory setting.                   |
|   |                  |                          | 1) User set value   |
|   |                  |                          | 2) Channel data (broadcasting frequency, etc.)  |
|   |                  |                          | 3) Password setting value   |
|   |                  |                          | 4) Operating time   |
|   |                  |                          | 5) StandbyCause   |
|   |                  |                          | 6) Auto installation flag   |
|   |                  |                          | 7) V-CHIP block setting value   |

#### 12. Software version

- 1. Main microcomputer
- 2. Monitor microcomputer
- 3. EDID data (Analog RGB)
- 4. (Reference: File name in the Technical Department)

For analog RGB Input3: IC509: edid\_dsub15\_fullhd\_v6\_256.BIN

#### 13. Writing the inch and model name onto EEPROM

Writing method

- 1. Pull out the AC cord.
- 2. Copy the application for writing inch/model name (HLI2MA01.USB) and model/inch file (52LE920.MDL) to the USB memory.
- 3. Hold down the power button and insert the AC cord.
- 4. Release the power button after 5 seconds.
- 5. Update starts.

The inch and model name are displayed.

6. Pull out the AC cord.

Model/inch file

- 52LE920.MDL
- 60LE920.MDL
- \* 32 inch is not necessary.

NOTE: When replacing the main PWB, make sure to perform the writing the inch and model name onto EEPROM

# [2] PUBLIC MODE SETTING PROCEDURE

#### 1. How to start Public Mode

• There are the following 3 ways to get the public mode setup screen displayed.

① In the adjustment process mode, turn on "PUBLIC MODE"

(2) 1) Plug AC cord and turn on the TV.

2) After picture displayed, touch the "POWER" key for 5seconds.

NOTE: Picture will disappear when you touch the power key, but keep touching it.

- 3) When the center icon LED blinks, release your finger from the power key.
- 4) Next, touch the "POWER" key with the "CH ( )" key and "VOL (+)" key touching.
- 5) When the center icon LED turns on, release your finger form the keys.

#### ③ It's same as ② from 1) to 3)

- 4) Next, touch the "POWER" key with the "INPUT" key and "CH ( ( )" key touching.
- 5) When the center icon LED turns on, release your finger form the keys.
- 6) Get the password input screen displayed.

#### Procedure

- The input starts with the leftmost digit.
- Use the numeric keys [1] thru [9] and [0] keys on the remote controller. The other keys are not acceptable.
- With a numeric-key input, "-" will change to "**\***". The input position will move one digit to the right.
- With all the 3 digits entered, the password will be verified.

7) The 3-digit password is now verified.

The password [0] [2] [7] provides for the public mode screen. (This screen comes on with whatever adjustment process settings.) With any other passwords, the screen changes to the normal mode.

#### 2. How to exit Public Mode

There are the following ways to quit the public mode setup screen.

- $\bullet$  Turn off the power with the "POWER" key. (  $\bigstar$  )
- Select "EXECUTE". (★)
- $\bigstar\dots$  "PUBLIC MODE" stays on in the adjustment process mode.
- $\bigstar$ ... The settings will be back to the factory ones.

#### 3. Public Mode Setting Values

• With the factory settings made, the public mode settings get initialized. (The adjustment process remains intact.)

#### 4. Public Mode Menu

The guidance is not displayed on screen.

Setup procedure

- To move the cursor up and down, use the "cursor UP/DOWN" key (remote controller) and "CH ( / )/( / )" key (remote controller and set).
- To change the settings, use the "cursor RIGHT/LEFT" key (remote controller) and "VOL (+)/(-)" key (remote controller and set).
- To save new settings, keep the cursor at "EXECUTE" and use "ENTER" key (remote controller and set).

| PUBLIC MODE        |             |
|--------------------|-------------|
| POWER ON FIXED     | [VARIABLE ] |
| MAXIMUM VOLUME     | [ 60 ]      |
| VOLUME FIXED       | [VARIABLE ] |
| VOLUME FIXED LEVEL | [ 20]       |
| RC BUTTON          | [RESPOND ]  |
| PANEL BUTTON       | [RESPOND ]  |
| MENU BUTTON        | [RESPOND ]  |
| AV POSITION FIXED  | [VARIABLE ] |

| EXECUTE            |             |
|                    |             |

# 5. On Setting Items

\* "EZ-SETUP" discussed below indicates "EZ-SETUP after the first power-on".

#### 1) POWER ON FIXED

| Selection        | Selection between "Variable" and "Fixed" (loop provided)  |
|------------------|---|
| Default          | – (Variable)  |
| Explanation      | In "Fixed" setting, the power-off by the power key of the unit is invalidated and the image is kept being received. The power can be turned off by stopping the power supply from AC. |
| Limit in Setting | Refer to the "Power-On Fixed" sheet.  |
| Exception        | None  |
| Remarks          | • In "Variable" setting, the power operation is in wait for 1 sec. and then turned off when the main power switch is off.   |

#### 2) MAXIMUM VOLUME

| Selection        | Adjustment from 0 to 60 (no loop)  |
|------------------|--|
| Default          | 60   |
| Explanation      | Sound volume can not be adjusted higher than the preset value.   |
| Limit in Setting | • When the sound volume is set lower than 59, only figures are displayed and the sound volume bar is not displayed.        |
|                  | The maximum sound volume for ON-timer (Wake up timer) is limited also to the preset value.                                 |
| Exception        |  |
| Remarks          | • When the sound volume is set higher than the MAX setting by the adjusting process, the sound volume control operation is |
|                  | prohibited for turn-up and the sound volume should be turned down to MAX in this state.                                    |

#### 3) VOLUME FIXED

| Selection        | Selection between "Variable", "Fixed", "ACON (AC CTRL)" and "AC/RCON (AC/RC CTRL)" (loop provided)  |
|------------------|---|
| Default          | Variable  |
| Explanation      | <ul> <li>FIXED: Fixed at the level adjusted for a fixed volume.</li> <li>AC CTRL: Start-up at the level specified for a fixed volume at ACON.</li> <li>AC/RC CTRL: Start-up at the level specified for a fixed volume at start.</li> </ul>  |
| Limit in Setting | <ul> <li>The sound volume for the ON-timer (Wake up timer) is fixed also without display of menu. Besides, the setting is made impossible. (Basically, the menu is not displayed.)</li> <li>The following keys become invalid: <ul> <li>Sound volume Up/Down (VOL +/-) [for both remote control and the unit]</li> <li>Mute (MUTE)</li> </ul> </li> </ul> |
| Exception        | • In the item "VOLUME" of adjustment process, the sound volume can be set freely irrespective of this setting.  |
| Remarks          | <ul> <li>As for sound volume fixing and sound volume MAX level, the sound volume fixing has priority.</li> <li>Once the sound volume has been changed by adjustment process, it should be set back to the sound volume preset by sound volume fixing level when the adjustment process ends.</li> </ul>   |

#### 4) VOLUME FIXED LEVEL

| Selection        | Adjustment from 1 to 60 (no loop)                                  |
|------------------|--|
| Default          | 20   |
| Explanation      | The sound volume to be fixed by "Volume fixed" is determined.      |
| Limit in Setting | None   |
| Exception        | None   |
| Remarks          | Setting is valid only when "Volume fixed" is selected for "fixed". |

#### 5) RC BUTTON

| Selection        | Selection between "Respond", "No Respond" and "Limited" (loop provided)   |
|------------------|---|
| Default          | Respond   |
| Explanation      | Making the remote controller settings.  |
|                  | <ul> <li>At the "No Respond" setting, the remote controller keys are disabled. Its power key (reception/standby key) is disabled too.</li> <li>At the "Limited" setting, some channel-related keys alone are operative. All the other remote controller keys (power, volume)</li> </ul> |
|                  | ▲ / ▼, channel ▲ / ▼, light control (brightness sensor), broadcast select) are inoperative.   |
| Limit in Setting | ① In "No respond" setting, all the keys (including the power key) are not accepted.   |
| Exception        | Adjustment process, inspection process and hotel only keys are valid irrespective of setting.   |
|                  | • All the keys can be used in adjustment process, inspection mode and hotel menu irrespective of setting.   |
| Remarks          |   |

#### 6) PANEL BUTTON

| Selection        | Selection between "Respond" and "No respond" (loop provided)   |  |  |
|------------------|--|--|--|
| Default          | Respond  |  |  |
| Explanation      | All the operations by keys (except the power key) of the unit can be invalidated.  |  |  |
| Limit in Setting |  |  |  |
| Exception        | <ul> <li>Adjustment process, inspection mode and hotel menu mode can be started irrespective of setting.</li> <li>All the keys can be used in adjustment process, inspection mode and hotel menu irrespective of setting.</li> </ul> |  |  |
| Remarks          |  |  |  |

#### 7) MENU BUTTON

| Selection        | Selection between "Respond" and "No respond" (loop provided)   |  |  |
|------------------|--|--|--|
| Default          | Respond  |  |  |
| Explanation      | In "No respond" setting, the menu operation by the menu key of the remote control and the menu key of the unit are invali-<br>dated.   |  |  |
| Limit in Setting |  |  |  |
| Exception        | <ul> <li>Adjustment process, inspection mode and hotel menu mode can be started irrespective of setting.</li> <li>All the keys can be used in adjustment process, inspection mode and hotel menu irrespective of setting.</li> </ul> |  |  |
| Remarks          |  |  |  |

#### 8) ON SCREEN DISPLAY

| Selection        | Selection between "Yes", "No" (loop provided)  |  |  |
|------------------|--|--|--|
| Default          | Yes  |  |  |
| Explanation      | • At the "No" setting, the following items are not displayed on screen: register, setting, adjustment menu, channel call and volume bar.   |  |  |
|                  | On the wide-screen models, an input selection is immediately made because the menu is not displayed.   |  |  |
|                  | At the "Limited" setting, some items cannot be displayed on screen.  |  |  |
|                  | On the Japan-destined models, the channel call "Message" alone cannot be displayed. (This is because the channel call message may be confused with a message being sent from the hotel.) |  |  |
|                  | On the North America-destined models, the OSD works the same as at the "No" setting.   |  |  |
| Limit in Setting | Keys falling under any of the following items become invalid.  |  |  |
|                  | ① Appearance of screen changes and the sound changes.  |  |  |
|                  | ② Personal functions which are hard to restore.  |  |  |
|                  | Screen display, menu, OFF-timer, ON-timer, AV MODE, screen size switching, clock setting, treble emphasis, AUDIO ONLY, sound changeover, LANGUAGE, CLOSED CAPTION                        |  |  |
| Others           | • Simple input switching is generated. Those which are restored soon after leaving as they are and may be requested for  |  |  |
|                  | change by customer are not prohibited.   |  |  |
|                  | Brightness sensor (BACKLIGHT) and PIC. FLIP  |  |  |
| Exception        | Such a caution which is displayed independently is displayed as it is.   |  |  |
|                  | Non-responding signal caution  |  |  |
| Remarks          | When CC has already been ON, CLOSED CAPTION is displayed.  |  |  |

#### 9) INPUT MODE START

| Selection   | Selection between "Normal", "Air (*)", "INPUT 1/2/3", "PC", "HDMI 1/2/3/4/5", "DVI" (loop provided)                      |  |  |
|---|--|--|--|
| Default   | Normal   |  |  |
| Explanation   | In power-ON, the input source to be started or channel can be set.   |  |  |
|   | (In standard mode, the operation follows the last memory.)   |  |  |
| About options   | All the input sources in the model are made selectable.  |  |  |
| In TV mode, the channel to be set follows the last memory and the content of the last memory is include |  |  |  |
|   | options. Ex.) Air (2), Cable (98.1) etc.   |  |  |
| Limit in Setting  | The display of channel setting menu and the channel setting operation are prohibited.                                    |  |  |
| Exception   |  |  |  |
| Remarks   | • In setting at "Normal", the setting of "Input mode fixed" is changed to "Variable" and selection should be prohibited. |  |  |

#### 10)INPUT MODE FIXED

| Selection        | Selection between "Variable", "Fixed", "ACON (AC CTRL)" and "AC/RCON (AC/RC CTRL)" (loop provided)  |  |  |  |
|------------------|---|--|--|--|
| Default          | - (Variable)  |  |  |  |
| Explanation      | <ul> <li>At the "Fixed" setting, the TV set gets started with the settings of "Input mode start", and then any other channels and inputs are not accepted.</li> <li>At the "ACON (AC CTRL)" setting, the TV set gets started with the settings of "Input mode start" under AC control.</li> <li>At the "AC/RCON (AC/RC CTRL)" setting, the TV set gets started with the settings of "Input mode start" under either control.</li> </ul> |  |  |  |
| Limit in Setting | <ul> <li>With the execution of hotel mode, the input source is forced to change to that set by "Input mode start" and the channel switching and input switching are prohibited thereafter.</li> <li>ON-timer's (Wake-up timer) channel items are not displayed or the operation is prohibited. (Basically, they are not displayed.)</li> <li>The following keys are invalidated.</li> </ul>   |  |  |  |
|                  | CH ▲ / ▼, direct tuning button, FLASHBACK, input  |  |  |  |
|                  | *However, the keys (input switching and CH ▲ / ▼ keys) of the unit for menu operation remain valid.   |  |  |  |
| Exception        | None  |  |  |  |
| Remarks          | In the following case, setting is cancelled and mode is changed to "Variable".  |  |  |  |
|                  | ①When the setting of "Input mode start" is set to "Normal".   |  |  |  |
|                  |   |  |  |  |

#### 11)RC\_PATH\_THROUGH

| Selection        | Selection between "OFF", "ON: TV RCE" and "ON: TV RCD" (loop provided)                |  |  |
|------------------|---|--|--|
| Default          | OFF   |  |  |
| Explanation      | Function to feed the remote controller-received signal to Pin 9 (open) on the RS232C. |  |  |
| Limit in Setting | None  |  |  |
| Exception        | None  |  |  |
| Remarks          | None  |  |  |

#### 12)AV POSITION FIXED

| Selection        | Selection between "Variable" and "Fixed" (loop provided)   |  |  |  |
|------------------|--|--|--|--|
| Default          | Variable   |  |  |  |
| Explanation      | In case of "Fixed" setting,<br>– Menu "Picture" and "Audio" setting can't be changed like "Dynamic (Fixed)".<br>– When "AV Mode" key is pressed, TV just displays current AV Mode (cannot be changed.).  |  |  |  |
| Limit in Setting | None   |  |  |  |
| Exception        | None   |  |  |  |
| Remarks          | <ul> <li>When receiving with AV Position key, OPC, Dolby key and other direct audio select keys, the current display stays on and no setting can be changed.</li> <li>Even by initializing personal information, the hotel-mode settings are kept intact. In this way, the AV positions, video and audio adjustment settings are not initialized.</li> </ul> |  |  |  |

#### 13)LOUD SPEAKER (ON/OFF)

| Selection        | Selection between "ON" and "OFF" (loop provided)  |  |  |
|------------------|---|--|--|
| Default          | ON  |  |  |
| Explanation      | If "OFF" is selected, TV stops Speaker output even without Headphone connected.   |  |  |
| Limit in Setting | None  |  |  |
| Exception        | None  |  |  |
| Remarks          | <ul> <li>Press the volume UP/DOWN key, and the mute icon appears for 4 seconds.</li> <li>The mute key and audio-related keys are displayed with caution.</li> <li>Usually, the headphones and monitor audio outputs can be adjustable.</li> </ul> |  |  |

#### 14)232C POWON

| Selection        | Selection between "Disable" and "Enable" (loop provided)                      |  |
|------------------|---|--|
| Default          | Disable   |  |
| Explanation      | In the standby mode, the power-on by the 232C command is enabled or disabled. |  |
| Limit in Setting | None  |  |
| Exception        | None  |  |
| Remarks          | None  |  |

15)PUBLIC MODE (ON/OFF)

| Selection        | Selection between "ON" and "OFF" (loop provided)                        |  |
|------------------|---|--|
| Default          | OFF   |  |
| Explanation      | In case of "ON", public mode settings are effected.                     |  |
| Limit in Setting | None  |  |
| Exception        | None  |  |
| Remarks          | The public-mode settings are operable only when this item is set at ON. |  |

# **CHAPTER 6. TROUBLESHOOTING TABLE**

# [1] TROUBLESHOOTING TABLE

Check the panel module.

| No monitor audio output  |                        |   |  |  |
|--|------------------------|---|--|--|
| <br>↓  |                        |   |  |  |

# [2] LED flashing specification at the time of an error (Center icon LED used)

#### 1. Display method

- Since only the center icon LED can be used, slow flashing and fast flashing are combined.
- Refer to Table 1.
- The Start from the detail display. (No outline display)
- After recovering from an error, if the same error cannot be generated again, refer to MONITOR ERR CAUSE on the process screen.
- · During version upgrade, the brightness of the flashing LED changes smoothly.
- When completing version upgrade, the brightness of the LED changes in a staircase pattern.

#### 2. LED flashing method

#### Error flashing

<Detail display example>

• Flashing during Verup

Flashing when completing Verup

#### Table 1. Concrete flashing pattern

| 14                           | Detail display                 |                      | Covers  |  |
|------------------------------|--------------------------------|----------------------|---|--|
| Item                         | Slow flashing                  | Fast flashing        | Cause   |  |
| Inverter/Lamp system failure | Flashes once                   | Flashes once         | Lamp error                                    |  |

#### 4. Monitor ERR STBY table

Outline: Communication/Power failure detected by the monitor microcomputer is stored on EEPROM, and the last 4 abnormal states can be confirmed in the process mode A.

Location: Page 1 of the process mode A: MONITOR ERR CAUSE "0" if there is no error. It is cleared to 0 on the last page of the process mode A.

| Display |                                | Error description  |
|---------|--------------------------------|--|
| 02      | Start-up communication error 2 | Initial communication from the main CPU is not received.           |
| 03      | Start-up communication error 3 | Only the initial communication is received.                        |
| 04      | Start-up communication error 4 | Until panel information request reception                          |
| 05      | Start-up communication error 5 | Until initialization completion reception                          |
| 06      | Start-up communication error 6 | Until version notification transmission                            |
| 07      | Start-up communication error 7 | Until start-up information notification transmission               |
| 08      | Start-up communication error 8 | Until start-up information response reception                      |
| 09      | Start-up communication error 9 | Until time-out setting reception                                   |
| 0A      | Communication error A          | REQ time-out   |
| 0B      | Communication error B          | Restart time-out during the beginning of time acquisition start-up |
| 0C      | Communication error C          | Ending sequence time-out   |
| 0D      | Communication error D          | Preset start-up time-out during completion                         |
| 0E      | Communication error E          | download, start-up time-out  |
| 0F      | Communication error F          | Time acquisition time-out  |
| 11      | Communication error H          | Regular communication time-out                                     |
| 16      | Panel-related error            | Lamp failure   |
| 1A      | Other error 2                  | Monitor temperature failure  |
| 1E      | Power supply error 2           | D_POW (DET_13V) failure  |
| 1F      | Power supply error 3           | D_POW (DET_D3V3) failure   |
| 21      | Power supply error 5           | Panel power failure  |
| 23      | Other error 3                  | Error standby request from the main CPU                            |

# **CHAPTER 7. MAJOR IC INFORMATIONS**

# [1] MAJOR IC INFORMATIONS

# **1. MAJOR IC INFORMATIONS**

#### 1.1. IC1504 (VHiSii9287+-1Q)

This IC is 4 input and 1 output HDMI port processor.

It integrated TMDS receiver and transmitter cores capable of receiving and transmitting at 2.25Gbps. (Supports video resolutions up to 1080p, 60Hz, 12bit.)

The Equalizer circuits to adapt long cable are integrated in This IC.

EDID and DDC support for 4 HDMI/DVI ports and 1 VGA port.(This IC includes 256-byte NVRAM and 256-byte SRAM for each port(5 total).)

#### 1.2. IC2002 (RH-iXC786WJQZQ)

The monitor microprocessor is intended to communicate with the main microprocessor and to operate the system.

It also controls power of the entire system.

#### 1.3. IC2702, IC2703 (VHiYDA164QZ-1Y)

The Class-D type digital audio power amplifier YDA164QZ gives maximum continuous output of 10 W/ch or woofer output 15W.

#### 1.4. IC3302 (RH-iXC951WJN1Q)

This LSI is FULL HIGH-DEFINITION 1080P DIGITAL TV SYSTEM-ON-A-CHIP.

It combines a cable/terrestrial 64/256-QAM and 8-VSB receiver, a transport processor, a digital audio processor, a high definition (HD) MPEG video decoder, 2D graphics processing, digital processing of analog video and audio, analog video digitizer and DAC functions, stereo high-fidelity audio DACs, HDMI receivers for 1080p 60 inputs, a 625-MHz processor, and a peripheral control unit providing a variety of television control functions.

The cable/terrestrial receiver directly samples a tuner output with an analog-to-digital converter (ADC).

The LSI digitally resample and demodulates the signal with recovered clock and carrier timing, filters and equalizes the data, and passes soft decisions to an ATSC/A74 and ITU-T J.83 Annex B-compatible decoder.

It has an MPEG-2 Digital Video Broadcasting (DVB)-compliant transport processor with advanced section filtering capability, DVB descrambler, and an MPEG-2 (MP@HL profile) video decoder.

Audio support includes a BTSC and a Dolby AC3/MPEG-2 Layer 1, 2, audio decoder.

The LSI provides analog and digital audio/video outputs.

A SPDIF output and a pair of analog outputs (L-R) are provided via the integrated audio DACs.

The NTSC analog video decoder is supported by its own motion adaptive deinterlacing and 3D comb filtering, including 1080i deinterlacing.

The LSI includes advanced 2D graphics processing.

One transport stream input is included.

The LSI incorporates a complete ARM11-based microprocessor subsystem including caches with bridging to memory and a local bus, where external peripherals can be attached.

Integrated peripherals include two USB 2.0, three UARTs, counter/timers and GPIO controllers.

In this time, H264 decode/VC-I decode/secure boot function are added to this IC.

#### 1.5. IC3501/IC3502 (RH-iXC754WJQZQ)

These are 1G bit (64M x 16bit) DDR2-1066 synchronous DRAM.

#### 1.6. IC8401 (RH-iXD047WJQZQ)

The 512M-bit NAND flash memory device stores the main CPU program.

#### 1.7. IC8455 (VHiR24064AS-1Y)

This is 64k-bit EEPROM device including the user setting.

#### 1.8. IC506 (VHiM3221EiP-1Y)

This IC is a high speed, single-channel RS-232 transceiver interface device that operates from a single 3.3V power supply.

The device provides the electrical interface between an asynchronous communication controller and the serial-port connector.

This device operate at data signaling rates up to 460kbit/s.

All RS-232(Tout and Rin) and CMOS (Tin and Rout) inputs and outputs are protected against electrostatic discharge (up to +/- 15kV ESD protection).

#### 1.9. IC9501(VHiKSZ8041T-1Y)

This IC is a single supply 10Base-T/100Base-TX Physical Layer Transceiver, which provides MII/RMII/SMII interfaces to transmit and receive data.

#### 1.10. IC2701 (VHiYSS951VZ-1Y)

Audio DSP (YSS951VZ) has digital audio adjustment function (for example, PEQ, bass/treble, balance, bass enhancer, etc.) and adjusts TVs audio quality.
